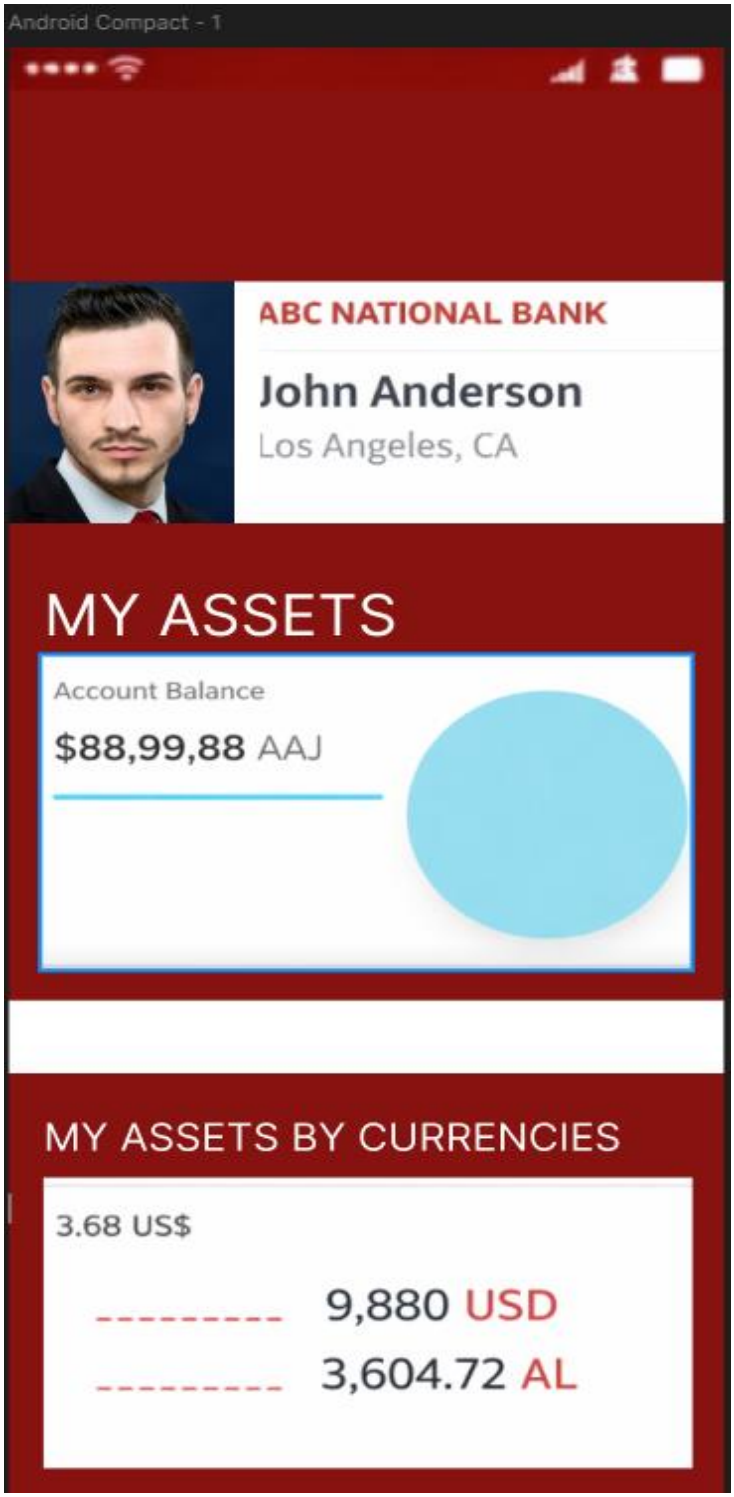
EXPERIMENT 1 BAD UI AND GOOD UI

Bad UI Design



Features & Drawbacks Identified (Bad UI – Left Screen) Flat & Outdated Visual Design

- The screen uses a very plain, light background with minimal contrast.
- No use of gradients, cards, shadows, or elevation.
- Overall design feels outdated and lacks a modern mobile-app look.
- The UI does not visually stand out or feel engaging**. Weak Visual Hierarchy**
- User name, email, and phone number are displayed with similar font weight and size.
- Important elements like the user name are not emphasized enough.
- Statistics (Trips, Distance, Carbon Saving) look like plain text instead of key highlights.

Unstructured Layout

- Content is presented in a simple vertical list without visual grouping.
- Excess empty space makes the screen look unfinished.
- Menu items (Bookings, Personal Information, Passengers, IRCTC details) are not clearly separated into sections.
- Lack of cards or containers reduces clarity.

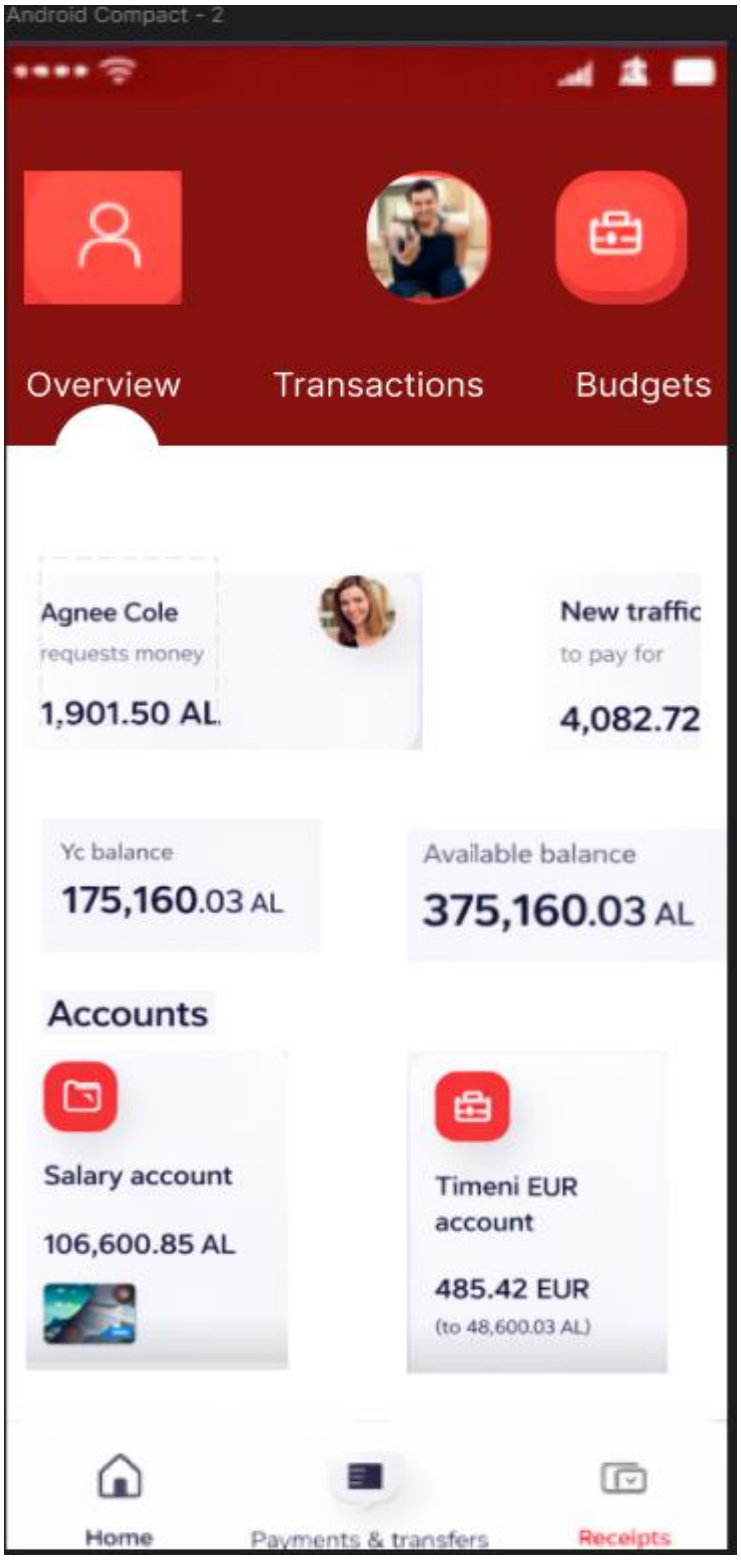
Low Personalization & Engagement

- Only an initial-based avatar is shown instead of a proper profile picture.
- The profile feels static and informational rather than interactive.

Poor Navigation Experience

- Bottom navigation is basic and visually disconnected from the main content.
- Icons are minimal and do not draw attention.
- No quick visual shortcuts to key features like bookings or account actions.

Good UI Design



Features & Enhancements (Good UI – Right Screen) Modern & Attractive Header Design

- A soft gradient background instantly improves visual appeal.
- User name, email, and phone number are clearly displayed in a dedicated header card.
- The header creates a strong first impression and anchors the screen visually.
- Rounded corners and smooth colour transitions add a premium feel.

Profile Picture & Personalization

- A circular profile avatar with an illustration is added.
- Makes the account page feel personal and user-centric.
- Helps users instantly recognize their profile.
- Improves emotional engagement and trust.

Strong Visual Hierarchy

- User name is bold and visually dominant.
- Key statistics (Total Trips, Distance Travelled, Carbon Saving) are shown in highlighted cards.
- Use of different font sizes, weights, and spacing improves readability.
- Important information stands out without overwhelming the user.

Structured Layout with Cards

- Statistics are grouped into rounded cards with elevation.
- Menu items are clearly separated using icons, dividers, and spacing.
- Each option (Bookings, Personal Information, Passengers, IRCTC details) is easy to scan.
- The screen feels organized and balanced.

Improved Colour, Contrast & Accessibility

- Soft background gradients with darker text improve readability.
- Accent colours are used consistently to highlight key areas.
- Icons improve clarity and reduce cognitive load.
- Better contrast supports accessibility and reduces eye strain.

Enhanced Navigation & Usability

- A visually distinct bottom navigation bar is provided.
- Icons combined with text labels improve recognition.
- Navigation feels intuitive and fast.
- Users can easily move between Home, Booking, Help, and Account sections.
